

PRESS RELEASE

Telespazio and ABS Expand Partnership to Deliver Tailored C-Band Connectivity Solutions for the Brazilian Market

Washington, D.C., 12 March 2025 – Telespazio and ABS (Agility Beyond Space) are expanding their partnership to introduce new managed C-band service solutions for the Brazilian corporate market. This latest initiative leverages Telespazio's ground infrastructure and ABS's satellite capacity to deliver high-performance, customized connectivity solutions tailored to enterprise needs.

In 2024, the partnership had secured several strategic projects, including the air traffic control connectivity project, and the launch of the teleport in Maricá, Brazil. It is now expanding its capabilities to serve businesses that require scalable and application-specific satellite solutions.

C-band connectivity projects often demand tailored services rather than standardized solutions. This new offering ensures reliable, adaptable connectivity designed to meet enterprise and mission-critical requirements across diverse industries.

"This next phase of our partnership with ABS allows us to offer businesses in Brazil greater control over their satellite connectivity," said Marzio Laurenti, CEO of Telespazio. "With ABS's capacity and our ground infrastructure, we are delivering solutions that meet the evolving needs of corporate customers."

"ABS and Telespazio continue to evolve our partnership to provide high-quality, adaptable satellite services that businesses can rely on," said Ramsey Khanfour, Chief Commercial Officer of ABS. "This collaboration ensures that companies operating in Brazil have access to connectivity solutions that can be customized to their needs, whether for enterprise applications, mission-critical operations, or network expansion."

This latest development reinforces our commitment to innovation and customer-focused satellite solutions, supporting the continued expansion of Brazil's corporate connectivity ecosystem.

##

About ABS

ABS (Agility Beyond Space) is a global satellite operator delivering reliable communication solutions for government, enterprise, telecommunications, broadcast, and maritime sectors. Its fleet covers 93% of the world's population, ensuring global connectivity.

Committed to agility and customer focus, ABS provides tailored solutions to industry challenges, enabling seamless communication. As a trusted partner, it helps clients achieve their operational goals efficiently. The company has offices in the UAE, Asia, and the United States.

About Telespazio Brasil

Telespazio Brasil is a subsidiary of Telespazio, a global leader in satellite services. Operating in Brazil since 1997 and headquartered in Rio de Janeiro, Telespazio Brasil is now one of the country's leading providers of Satellite Telecommunications and Geoinformation applications. The company offers a wide range of cutting-edge solutions in the fields of satellite telecommunications, multimedia services, satellite ground systems, Earth observation services, and applications for corporate,

government, and institutional clients. In the field of Earth observation, Telespazio Brasil markets satellite data generated by the Italian COSMO-SkyMed radar constellation on behalf of e-GEOS (80% Telespazio; 20% ASI).
